“No-deal” is a bad deal for science

If we leave without a deal, it will impact on scientific research immediately and could take years to rebuild.

1 in 6 academic staff in UK Higher Education Institutions are from elsewhere in the EU. They can easily choose to build their careers elsewhere.

The UK could lose access to over £1 billion a year in EU research funding. Even with the UK government’s guarantees, UK-based researchers and SMEs will lose access to around half a billion a year in research funding, having an immediate impact on research underway in the UK. It could take years to develop alternatives, meaning that valuable research could be stopped in its tracks.

We lose access to new medicines and technologies and limit our ability to tackle global problems as regulatory and governance arrangements fall apart.

Science needs a deal that:

- **Keeps highly-skilled scientists working in the UK** and ensures that international talented people still choose to come here and contribute to our globally competitive science.

- **Keeps access to money and networks** that support the UK to work with scientists around the world.

- **Maintains regulatory alignment** that allows access to new medicines and technologies.

“The UK is a global leader in science because top home-grown and international scientists want to work here. We must do everything we can to ensure that the UK maintains its role at the heart of European science, because that is in everyone’s best interests. If science loses, everyone loses.”

Venki Ramakrishnan, President of the Royal Society.
UK science punches well above its weight

Scientific research and innovation are essential for UK jobs, healthcare and improving quality of life for us and people around the world.

Being part of the EU has played a huge role in the UK becoming a global scientific powerhouse and magnet for talent, as part of a strong European Research Area that can compete on the scale of other scientific superpowers, such as the USA and China. That success is now at risk.

If we leave without a deal, it will impact on scientific research immediately and it could take years to rebuild these relationships.

Despite having less than 1% of the world’s population, the UK produces 15% of the most highly cited scientific papers.\(^1\)

In 2015, over half of the UK’s research output was the result of international collaborations and these collaborations are increasing – both in absolute terms and as a proportion of the UK’s research output.\(^2\) We must not put these collaborations at risk.

---

Skilled people

If we leave without a deal: EEA nationals working in the UK will have little clarity over their long-term future. UK-based researchers come from around the world and work with people across the globe. They can easily choose to build their careers elsewhere.

**R&D intensive companies rely on a mobile scientific workforce to respond to day to day challenges which require specialist knowledge or skills.** “Failures to mutually recognise this kind of highly flexible movement with the EU would present serious barriers to such operations6”.

Costs could become a deterrent to skilled individuals that the UK needs. If the UK decided to apply immigration charges to EU nationals, based on the current system, an EU academic with a partner and two children entering the UK on a 3 year Tier 2 visa would have to pay upfront costs, equivalent to 14% of their annual salary6.

**1 in 6 academic staff in UK Higher Education Institutions are from elsewhere in the EU. They can easily choose to build their careers elsewhere3.**

Many UK nationals work abroad, building their skills and networks and often bringing them back to the UK4. There is no clarity about what would happen to them if we leave the EU without a deal.

Where do academic researchers working in the UK come from?

Where do postgraduate researchers in the UK come from?

CASE STUDY

Dr Steven Spoel is a Dutch plant biologist, who has worked in the USA. He is now a Royal Society University Research Fellow and Head of Molecular Plant Sciences at the University of Edinburgh. His lab examines how plants respond to stresses encountered in their ever-changing environment. This research helps to design new stress-resilient food crops that increase agricultural yields in challenging environments and is vital to establishing future food security for a rapidly growing world population.

3. There are 206,870 academic staff working in the UK. 17% (35,920) of Academic staff working in the UK HEIs are non-UK EEA nationals. https://royalsociety.org/~/media/policy/projects/brexit-uk-science/uk-research-eu-people-june-2018.pdf

6. https://royalsociety.org/topics-policy/publications/2018/consultation-response-home-office-approach-to-charging-for-services/ Family in this scenario is a partner and two children with an average salary of £37500. See https://royalsociety.org/~/media/policy/projects/brexit-uk-science/references-and-workings-for-brexit-no-deal-factsheet.xlsx for the calculations on which this is based
Funding and networks

If we leave without a deal: We lose access to funding and networks that support work with brilliant scientists around the world and undermine our relationship with some of our strongest scientific collaborators.

Without a deal, the UK would immediately become a third country with limited access to Horizon 2020, the current EU research and innovation funding programme which supports research in the UK, and collaborations with scientists around the world.

This funding has been decades in development and creates easy ways for European researchers to work together. Global collaborations like these are increasingly important for cutting-edge research, enabling researchers in the UK to work with the best teams around the world. It would take a long time to rebuild similar relationships. We need to be growing mechanisms that help us to build these relationships, not cutting ourselves out of them.

Our growing digital economy could be damaged by a no-deal scenario. IT systems science and computer software engineering are highly dependent on EU funding (30% of their funding comes from the EU). This is a significant amount of money (£4.6 million in 2014 – 15). If the UK were to be cut off from EU research funding in the event of no deal, this could have serious consequences for our future digital workforce if replacement funding were not quickly found.

EU countries are among the UK’s top ten strongest scientific collaborators, forging relationships that are valuable to both countries.

17% of the R&D undertaken by UK SMEs comes from the EU. Without a deal, UK SMEs will not be able to access EU SME Instrument funding.

The UK could lose access to over £1 billion a year in EU research funding. Even with the UK government’s guarantees, UK-based researchers and SMEs will lose access to around half a billion a year in research funding, having an immediate impact on research underway in the UK. It could take years to develop alternatives, meaning that valuable research could be stopped in its tracks.

7 EU countries are among the UK’s top ten strongest scientific collaborators, forging relationships that are valuable to both countries.

Regulation and governance that helps us work together

If we leave without a deal: We lose access to new medicines and technologies and limit our ability to tackle global problems.

The diseases that affect people in the UK affect people across the EU and around the world. Similarly, the same technologies can improve all of our lives, from smart phones to electric cars. Agreements, shared regulatory standards and governance help us work together, enabling us to pool expertise and resources to develop cures faster, innovate more rapidly to bring new products to market and tackle global challenges such as climate change that will affect us all. Without the clarity and certainty provided by a deal, these relationships will fall apart.

Without regulatory alignment with the EU the UK could be excluded from many clinical trials of new treatments. Taking part in these trials ensures that NHS patients have access to the most cutting edge treatments.

Doctors have warned that leaving Euratom without a deal would see critical supplies of medical isotopes imported for cancer patients held up at the border. Euratom establishes a single market for the trade in nuclear materials and technology.

Without clarity, the UK will fall out of the EU emissions trading scheme, a key tool for reducing global greenhouse gas emissions.

Every month, 45 million packs of medicine move from the UK to the EU, with 37 million moving the other way. This relies on agreements and shared regulation. AstraZeneca, the UK’s second largest pharma company who employ 7,000 people in the UK, plans to increase its drugs stockpiles by about 20% in preparation for a no-deal Brexit.

Research-intensive manufacturers based in the UK may move abroad. Jaguar Land Rover employs 40,000 people in the UK and exports £18bn of goods a year. They have warned that a hard Brexit would cost £1.2bn a year in trade tariffs and make it unprofitable to remain in the UK.

Footnotes:
12. FT (2018) Jaguar Land Rover says hard Brexit will cost it £1.2bn a year https://www.ft.com/content/d077f3aa-7f8a-11e8-bc55-50daf1f0720d
Science needs a deal that:

Keeps highly-skilled scientists working in the UK and ensures that international talented people still choose to come here and contribute to our globally competitive science.

Ensure that UK and EU scientists can continue to work in each others’ countries with minimal friction, bureaucracy and cost.

Demonstrate that the UK is a great place to do great science, and a welcoming place for people around the world to choose to bring their specialist skills and come and work.

Keeps access to money and networks which support the UK to work with scientists around the world.

Ensure that the UK remains a part of Horizon 2020 (the EU’s research and innovation funding programme) to its end.

Keep the door open to full association with the next EU research and innovation funding programme, Horizon Europe.

Maintains regulatory alignment that allows access to new medicines and new technologies.

Ensure that the UK can continue to take part in EU-wide clinical trials and European Reference Networks, which help us to do cutting edge research into new medical treatments and diagnostics, and give patients access to these.

Agree regulation and governance that will ensure that scientists can continue to work together across borders and we can all benefit from the new medicines and technologies that they create.
